TeliaSonera International Carrier puts Toronto on the map

Building on its continuing success in North America, TeliaSonera International Carrier (TSIC) announced expansion of its network with a new Point-of-Presence (PoP) within the Cologix 151 Front Street data center in Toronto. The extension of TSIC's fiber network into Canada will enable more customers in the region to execute their business-critical activities via one of the top-three global IP backbones.

Ivo Pascucci, Regional Director – Americas, TSIC, says, "With 200+ PoPs globally, this is our 36th in North America with the network now covering 24 markets. We're excited to open this, our first Canadian PoP." The addition of Toronto, based on fiber links to New York and Chicago, means Canadian customers now have the option to connect locally for high quality global reach."

"Our ongoing expansion of the North American network is strategically important and will help us live up to our brand promise to be the carrier of the future. In fact, our IP network is the world's third largest now directly connecting 345+ million end-users. We find North American customers are increasingly turning to us as a competitive alternative for their telecommunications needs."

Grant van Rooyen, Chief Executive Officer, Cologix, adds, "TSIC has established itself as a strong and innovative player within the wholesale telecommunications business across the Americas and beyond. For that reason we are extremely proud to be adding this premium provider to our Toronto data center."

TeliaSonera International Carrier has a strong history in North America. Present since 1995, it has a growing Canadian and US customer base that includes Facebook, JustinTV, and The Quilt. In addition to opening new PoPs and launching the TeliaaSonera IPX, TSIC has 100G-enabled its network throughout North America and Europe.
