

FLEXCloud

SHARED, DEDICATED, OR HYBRID. BY DESIGN.

FLEXCloud from Cologix provides an efficient and cost-effective way to enhance and extend your company's IT infrastructure. Our portfolio includes public, private and hybrid options, and easily integrates with all of our other **FLEXServices**, assuring you the flexibility, reliability and security that your business demands. **FLEXCloud** eliminates the servers, network equipment and maintenance costs associated with operating your own infrastructure—resulting in significant CapEx and OpEx savings.

When you combine this state of the art technology with technical support that's second to none, your search for the right cloud provider has ended.

FLEXCloud Highlights

- Public, Private and Hybrid Options
- Leverages VMware VCloud Platform
- High end, high availability HIPAA/ HITECH compliant cloud infrastructure
- Enterprise grade hardware deployed in redundant implementations
- Robust Service Level Agreements (SLAs)
- Rapid scalability to immediately respond to business demands
- Secure Web portal or API allows you to manage cloud resources on demand
- Hosted in a Cologix data center, with fully redundant 2 (N+1) power, cooling, and connectivity
- Easily integrates with all Cologix **FLEXServices**
- 24x7x365 onsite Support

FLEXCloud Public

High Performance, High Availability

FLEXCloud Public is a highly available, highly redundant virtualized hosting platform built on a scalable, multi-tenant infrastructure; all housed in Cologix's enterprise class data centers.

IT resources— applications, compute, storage, and network—are securely delivered to you as a service, when and where you need them, and are all easily scalable to meet your changing business demands. And because it provides access to shared computing services and resources, you can benefit from excellent economies of scale.

FLEXCloud Public allows you to increase redundancy, decrease provisioning time for new servers and storage, save money by eliminating hardware support contracts, and enjoy quick expandability compared to hosting your own physical servers.

FLEXCloud Private

Dedicated, Secure and Compliant

FLEXCloud Private is a fully dedicated, not shared or multi-tenant virtualized, hosting infrastructure housed in Cologix's enterprise class data centers.

This is a great fit when your business demands the efficiency, flexibility, and reliability of cloud computing and wants the certainty of dedicated infrastructure for performance and security. It's also an ideal solution for businesses with heavy regulatory compliance requirements in place— such as HIPAA/HITECH—that also want to take advantage of the cost savings of a hosted, managed private cloud environment.

FLEXCloud Hybrid

Customized Mix of Environments

FLEXCloud Hybrid gives you the best of both worlds: the best features of multi-tenant **FLEXCloud Public** and dedicated **FLEXCloud Private** environments, plus the ability to utilize physical hardware from your Cologix colocation environment.

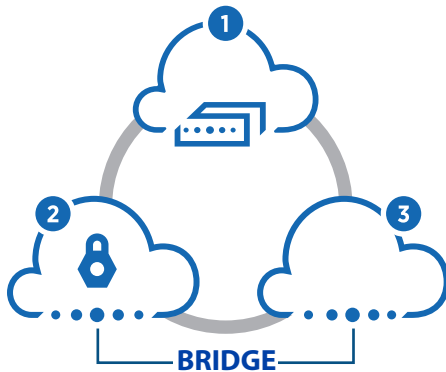

This allows you to utilize **FLEXCloud** for certain resources like compute and storage, and seamlessly integrate existing collocated backend resources, such as databases, into your solution via **FLEXBridge** private layer 2 or 3 connections. You can also connect cloud compute resources directly into your colocation environment to handle overflow situations such as seasonal spikes that require extra compute capacity.

The possibilities are limitless.

FLEXCloud

SHARED, DEDICATED, OR HYBRID. BY DESIGN.

	1 Hybrid Cloud	2 Private Cloud	3 Public Cloud
Architecture	Shared, dedicated, or collocated	Fully dedicated	Shared, multi-tenant
Ideal For	<ul style="list-style-type: none"> Companies that want to gradually migrate to Cloud Businesses that want virtualization but have requirements for a physically separate environment Large CPU demands and storage capabilities 	<ul style="list-style-type: none"> Companies with regulatory compliance requirements Environments requiring the highest level of security Specialized hardware, OS, or software licensing requirements 	<ul style="list-style-type: none"> Applications requiring high performance, scalability and availability Production environments Testing, development and quality assurance
